FUTURE LAND USE

(element)

DRAFT

Florida State Statutes, Chapter 163, requires each local government to prepare a **Future Land Use Element**. The **Future Land Use Element** must also be consistent with the Broward County Land Use Plan under the Broward County Charter. This element has been drafted to meet, and exceed, both requirements.

The **Future Land Use Element** aligns with the **City-Wide Growth Management Framework** and the **City-Wide Mobility Framework** as outlined within **City Structure**.

This element plays a central role in planning and managing the City's growth, addressing land use across a wide range of areas, including public facilities, transportation, housing, natural resources, and more. Additionally, this Element provides guidance for regulatory, financial, and programmatic decisions and serves as the foundation for the City's Zoning and Land Development Regulations, which are key tools for implementing the Comprehensive Plan.

Further, the **Future Land Use Element** controls the location, type, intensity, and timing of new or redeveloped uses of land. Through the **Future Land Use Element**, the City of Hollywood intends to foster compatible development that maximizes and maintains the characteristics of the City in a manner that is consistent with the economic, physical, and social needs of our residents.

The City of Hollywood's Future Land Use Map is the blueprint for how land will be used and developed to meet the evolving needs of residents, businesses, and visitors. This goal promotes a thoughtful arrangement of future land uses across the City, from low-density neighborhoods to dynamic mixed-use centers, and ensures that zoning, infrastructure, and design standards reinforce the City's long-term vision.

DRAFT

GOAL X.A: MAPPING THE FUTURE

Maintain and implement the City of Hollywood Future Land Use Map as the guiding framework for land use and development to meet the evolving needs of residents, businesses, and visitors. Ensure that zoning, infrastructure, and design standards align with the City's long-term vision by promoting a balanced distribution of land uses, including low-density neighborhoods, mixed-use centers, and transit-connected, walkable communities. Support development patterns that integrate clearly defined intensity ranges, enhance natural systems, and foster a vibrant, connected, and environmentally responsible urban environment.

OBJECTIVE X.X: Ensure a balanced mix of uses that support a vibrant community and encourage opportunities for economic development.

Policy X.X: The Future Land Use Map is a generalization of the desired future development pattern for the City of Hollywood. The Future Land Use Map use categories provide general guidelines and limits. In all cases, the City's Zoning and Land Development Regulations and Zoning Map must be consulted to determine specific use and development regulations for any parcel and shall be consistent with the uses listed in Section 2 of the Broward County Land Use Plan (BCLUP). The regulations will, however, conform to this Plan.

Policy X.X: The City shall amend the City's Zoning and Land Development Regulations to implement land use intensity and residential density standards as stated in this Future Land Use Element.

Policy X.X: Provide a balance of uses that foster a vibrant and viable community, and economic development opportunities that are consistent with the Broward County Land Use Plan.

Policy X.X: Better define rezoning criteria to address potential land use conflicts and promote harmonious development patterns.

Policy X.X: Manage nonconforming uses to reduce their impact on surrounding areas, promote alignment with the goals of this element, and encourage voluntary compliance or redevelopment through clear guidance and support.

DRAFT

OBJECTIVE X.X: Promote the development and preservation of predominantly residential areas that support a range of daily activities and living arrangements. These areas should prioritize high-quality housing environments while integrating complementary land uses that enhance livability. In alignment with the Complete Community concept, ensure that residents have convenient access to opportunities to live, work, learn, and play within their neighborhoods.

Residential Land Uses

Areas of the City that are predominantly residential with varying levels of intensity and use that accommodate many activities of daily life. These areas are intended primarily for dwellings, with supporting land uses that contribute to a high quality of life and a well-functioning residential environment. In alignment with the Complete Community concept, these areas are designed to ensure that residents can live, work, learn, and play within close proximity.

Appropriate supporting uses may include neighborhood shopping centers, parks, schools, community facilities, and small-scale services that meet daily needs. A mix of housing types and densities is encouraged to support diverse household needs and promote inclusivity. These areas should be walkable, connected by safe and accessible transportation options, and integrated with green spaces and public amenities that foster social interaction, health, and sustainability. The goal is to create neighborhoods that are not only places to live, but complete, resilient communities where people of all ages and backgrounds can thrive.

> **Policy X.X:** The land use categories depicted on the Future Land Use Map are intended to protect established residential areas and encourage economic development and redevelopment.
>
> **Policy X.X:** Residential areas shall be designated on the Future Land Use Map consistent with those categories identified within the Broward County Land Use Plan. The categories indicate the maximum number of dwelling units per gross acre permitted by the Broward County Land Use Plan.
>
> **Policy X.X:** Ensure compatibility between adjacent land uses by developing zoning strategies that strengthen compatibility and design requirements between single-family residential areas and more intense non-residential uses along trafficway corridors.
>
> **Policy X.X.:** To allow both the public and private sectors to respond to changing conditions and permit the appropriate location of Neighborhood Commercial Uses within or adjacent to established residential Neighborhoods, the City shall permit

DRAFT

up to 5% of the area designated residential to be used for Neighborhood Commercial Uses as identified and in accordance with this Plan.

Residential Density

The following future land use designations shall be utilized in the neighborhoods of the City.

1. **Low Residential (LRES)**

Policy XXX: The Low Residential category is intended for low-density residential development, allowing up to 5 dwelling units per acre. This designation primarily supports single-family detached homes, but may also include a variety of compatible housing types limited in scale such as:

- Townhomes
- Duplexes
- Cottage-style homes
- Other small-scale residential forms that maintain a low-density character (1 – 2 stories)

Development in this category should preserve neighborhood scale and character while offering a range of housing options to meet community needs.

2. **Low Medium Residential (LMRES)**

Policy XXX: This category supports low- to medium-density residential development, allowing up to 10 dwelling units per acre and ensuring design compatibility when adjacent to lower-density areas. Housing types may include:

- Single-family detached homes
- Cottage courts or pocket neighborhoods
- Duplexes, triplexes, and fourplexes
- Townhouses or rowhouses
- Multifamily buildings (typically 1- 2 stories)

Additionally, Recreational Vehicle (R.V.) parks and Special Residential Facilities may be permitted only in areas designated under this category or in areas with higher allowable residential density.

3. **Medium Residential (MRES)**

Policy XXX: The Medium Residential land use category is intended to support medium-density residential development, allowing for up to 16 dwelling units per acre. This designation encourages a variety of housing types that provide a transition between low-density neighborhoods and higher-intensity

DRAFT

urban areas, promoting both housing diversity and efficient land use. Appropriate residential forms in this category include:

- Townhouses and rowhouses
- Duplexes, triplexes, and fourplexes
- Cottage courts or clustered housing developments
- Low-rise multifamily buildings (typically 2–3 stories)

This category is ideal for areas with access to transit, employment centers, and community amenities. Development should be designed to enhance walkability, support neighborhood connectivity, and maintain a human-scale character.

Incorporating principles of complete communities, MRES areas may also include compatible non-residential uses such as:

- Neighborhood-serving retail or services
- Parks and open spaces
- Schools and civic facilities

Design standards should ensure that new development respects the surrounding context, includes pedestrian-friendly features, and contributes to a vibrant, livable neighborhood environment.

4. Medium High Residential (MHRES)

Policy XXX: The Medium High Residential category is intended for moderately high-density housing, allowing up to 25 dwelling units per acre. This designation supports a range of mid-rise residential buildings, typically 3 to 5 stories, including:

- Mid-rise apartments
- Condominiums
- Stacked flats or garden-style multifamily units

MHRES areas should serve as transitional zones between lower-density residential neighborhoods and more intense urban or commercial centers. This category is ideal for locations near corridors with moderate transit access, mixed-use districts, or institutional or employment campuses.

Key characteristics include:

- Moderate building heights that maintain compatibility with adjacent lower-density areas
- Enhanced walkability and access to local services
- Opportunities for infill development that support housing diversity without overwhelming neighborhood scale
- Form-based design standards

DRAFT

- Context-sensitive infill development

5. High Residential (HRES)

Policy XXX: The High Residential category is designated for high-density urban living, permitting up to 50 dwelling units per acre. This category supports high-rise residential development, typically 6 stories and above, including:

- High-rise apartment towers
- Vertical mixed-use buildings with residential units above ground-floor retail
- Large-scale multifamily complexes

HRES areas are typically located in urban cores, near major transportation hubs, employment centers, and regional commercial districts. These areas are designed to support transit-oriented development (TOD) and accommodate a high concentration of residents in a compact footprint.

Key characteristics include:

- Vertical density that maximizes land efficiency
- Proximity to transit, jobs, and amenities
- Urban design standards that promote active streetscapes and public realm enhancements
- Affordable housing incentives or mixed-income development if applicable
- Consider referencing public realm enhancements like plazas, streetscapes, or mobility hubs

6. Irregular (IRR)

Policy XXX: In the Broward County Land Use Plan under the BrowardNext framework, the term "Irregular Future Land Use" refers to a designation used when a parcel of land does not conform to the standard land use categories or density ranges typically applied within a Flexibility Zone. These irregular designations often result from:

- Historical land use patterns
- Annexations or boundary adjustments
- Unique development approvals or agreements
- Special zoning overlays or exceptions

There are areas of the City which have been given an "irregular" future land use designation as they don't fall clearly into one of the above categories. For each of these areas the maximum dwelling units per acre allowable is

DRAFT

indicated by the number in a circle inside the dashed line. The color used on these areas is only an approximation and is not controlling.

DRAFT

Table 1 – Residential Land Use and Density

Category	Density (DU/acre)	Typical Building Types	Typical Height Range
LRES	Up to 5	Single-family, duplexes, townhomes	1–2 stories
LMRES	Up to 10	Cottage courts, duplexes, townhomes, small apartments	1–2 stories
MRES	Up to 16	Townhomes, low-rise multifamily	2–3 stories
MHRES	Up to 25	Mid-rise apartments, condos	3–5 stories
HRES	Up to 50	High-rise apartments, mixed-use	6+ stories

Notes:

1. All references to density in the plan refer to gross density allowable. The gross acreage of any area means the total number of acres in the area, including acreage used or proposed for streets, lakes, waterways, and property to the centerline of any abutting street or road right-of-way. Credit towards density is not given for North and South Lakes nor any canals of the primary drainage system.
2. Specific provisions of the City's Zoning and Land Development Regulations will further limit the amount and type of dwelling units which can be constructed on a parcel.
3. See the Objective X and associated Policies regarding Flexibility Units as permitted by the Broward County Land Use Plan.

DRAFT

Residential Uses

Uses allowed within the neighborhood areas to the degree and extent permitted by the applicable Zoning and Land Development Regulations shall support the principles of Complete Communities. These uses may include a diverse mix of residential types, neighborhood-serving commercial and civic uses, and public spaces that promote walkability, social interaction, and access to daily needs. The intent is to foster inclusive, vibrant, and sustainable neighborhoods where residents can live, work, and play within a cohesive and well-connected environment.

1. Dwelling units and accessory uses and structures subject to density limitations as expressed by the Future Land Use Map, applicable ordinances, and the following sub-section, "Density."

2. Hotels, motels, and similar lodgings. The maximum number of hotel, motel or similar lodging units permitted on any parcel designated for residential use is double the maximum number of dwelling units permitted by the Future Land Use Map.

3. Recreational vehicle sites, in the Low-Medium (10), Medium (16), Medium-High (25) and High (50) Residential density ranges. The maximum number of recreational vehicle park sites permitted is:

a. Equal to the maximum number of dwelling units designated for that parcel on the Future Land use Map if the Zoning and Land Development Regulations allow permanent location of recreational vehicles on the sites; or

b. Double the maximum number of dwelling units designated for that parcel on the Future Land Use Map if the Zoning and Land Development Regulations prohibit permanent location of recreation vehicles on the sites.

4. Parking areas as specifically limited by the City's Zoning and Land Development Regulations.

5. Parks, Greenways, Blueways and other outdoor recreational facilities, and recreational, civic, or cultural buildings ancillary to the primary outdoor recreational use of the site.

6. Community facilities designed to serve the residential area such as schools, day care centers, places of worship, clinics, nursing homes, rehabilitation centers, governmental administration, police and fire protection facilities, libraries and civic centers, hospitals, cemeteries.

7. Public utilities, including water and wastewater treatment plants, pumping stations, power plant substations and transmission facilities and solid waste disposal and transfer stations.

DRAFT

8. Communication facilities.

9. Agriculture.

10. Office and/or retail development shall be designed to enhance neighborhood character, promote walkability, and support mixed-use environments. To support the creation of Complete Communities and enhance neighborhood livability, the following hierarchy of office and neighborhood serving retail uses shall be permitted, subject to compatibility standards and applicable zoning regulations.

The following office and/or retail developments shall be permitted:

a) Local Plazas serving the immediate residential neighborhood with daily goods and services such as corner stores, cafes, personal service establishments, and small-scale offices, encouraged to be pedestrian-oriented and integrated into the neighborhood fabric, and shall not generate traffic volumes incompatible with surrounding residential uses.

b) Community-Based Centers serving multiple neighborhoods with a broader range of goods and services such as grocery stores, pharmacies, medical offices, and neighborhood restaurants, located at the intersection of collector or arterial roads, and must include buffering, screening, and design elements to ensure compatibility with adjacent residential uses, with encouraged shared access and parking to minimize curb cuts and traffic impacts to the neighborhoods.

c) Offices, and/or retail sales of merchandise or services, are subject to the following:

1) No contiguous area used for offices and/or neighborhood retail may exceed ten acres.

2) Office and/or neighborhood retail developments shall be located a minimum of 500 feet apart.

3) No more than a total of 5% of the area designated for residential use within a flexibility zone on the City's Land Use Map may be used for office and/or retail sales of merchandise or services.

4) Regardless of constraints in (a) and (b) above, space within residential buildings in areas designated for medium-high (25) residential or high residential density may be used for office and/or neighborhood retail uses, as long as no more than 50% of the floor area is used for said purposes.

DRAFT

5) Regardless of constraints in (a) and (b) above, space within residential buildings in areas designated medium (16) residential density may be used for offices, as long as no more than 50% of the floor area is used for offices.

11. Special Residential Facilities in the low-medium to high ranges and subject to density requirements. A maximum of 100 "Bonus" sleeping rooms may be allocated that are permanently dedicated to the Special Residential Facility use without allocating density. See Special Residential Facilities in the definitions section for additional specifications.

DRAFT

OBJECTIVE X.X: Allow for differing intensities of development compatible with adjacent and surrounding land uses and ensure consistent districts in the City's Zoning and Land Development Regulations.

Non-Residential

Per Section 163.3177(6)(a) of Florida Statutes, local governments are required to define in their comprehensive plan standards for the intensity of use of nonresidential land uses. Land use amendments will be evaluated to ensure they do not exceed the average FAR for nonresidential uses in a sub-area. If within limits, amendments are deemed intensity compatible. Lands designated as Activity Center do not require separate intensity standards, as the Broward County Land Use Plan defines intensity through maximum square footage limits for such areas.

Policy X.X: In compliance with Section 163.3177(6)(a), Florida Statutes, the City has adopted a city-wide Floor Area Ratio (FAR) as a standard for use in establishing a measure to calculate the impacts of proposed nonresidential land use amendments upon the City's ability to serve the proposed land use amendment. For these purposes, FAR is defined as follows: "the gross floor area of all buildings or structures on a plot of land divided by the total plot area, excluding such features as stairwells and cupolas."

Policy X.X: Exempt essential community facilities (public schools, hospitals, emergency services) from Floor Area Ratio (FAR) while ensuring adequate infrastructure capacity and minimal impact on surrounding areas.

Policy X.X.: Lands designated "Commerce" on the Future Land Use Map may be decreased up to twenty (20) percent for residential use in accordance with the rules established within the "Administrative Rules Document: Broward County Land Use Plan" and the Chapter 163, Florida Statutes plan adoption and amendment process.

Policy X.X: New development and redevelopment shall comply with the intensities outlined in this Plan.

Policy X.X.: To allow both the public and private sectors to respond to changing conditions and permit the appropriate location of Neighborhood Commercial Uses within or adjacent to established residential Neighborhoods, the City shall permit up to 5% of the area designated residential to be used for Neighborhood Commercial Uses as identified and in accordance with this Plan.

DRAFT

Commerce Uses

Areas of the City that are predominantly non-residential, supporting a diverse range of commercial, institutional, and industrial activities that drive economic vitality and community services. These areas are intended primarily for employment, commerce, and public functions, with complementary uses that enhance accessibility, sustainability, and urban character. In alignment with the Complete Community concept, these areas are designed to ensure that people can work, shop, access services, and engage in civic life within a well-connected and dynamic environment.

1. General Business (GBUS)

This designation encompasses a wide range of commercial activities, including retail, wholesale, service and restaurant uses at the neighborhood, community, regional and highway scale. Primary uses include retail, office, wholesale, light fabricating, storage and warehouses, parking lots, recreation and open space, commercial recreation, cemeteries, public facilities, institutional uses, private clubs, utilities, transportation, communication and easements, and non-residential agricultural uses until converted.

General Business Uses

1. Neighborhood, community, regional and highway retail uses, including shopping centers.
2. Office and business uses.
3. Commercial uses, including wholesale, light fabricating, storage and warehouse uses, parking lots.
4. Hotels, motels and other tourist accommodations subject to the following:
   a) In that portion of the CHHA east of the Intracoastal Waterway and north of Sheridan Street (North Beach Barrier Island), hotels and motels shall not exceed 50 hotel rooms per acre.
   b) In that portion of the CHHA west of the Intracoastal Waterway, hotels and motels shall not exceed 50 hotel rooms per acre.
   c) In that portion of the CHHA east of the Intracoastal Waterway between Sheridan Street and Hollywood Boulevard (Central Beach Barrier Island), hotels and motels shall not exceed 50 hotel rooms per acre. Provided however, the City Commission may approve up to an additional 50 rooms per acre (for a maximum of 100 rooms per acre) from the “Hollywood Beach Hotel Room Pool” containing no more than 1000 rooms.

DRAFT

d) In that portion of the CHHA east of the Intracoastal Waterway and south of Hollywood Boulevard (South Beach Barrier Island) hotels and motels shall not exceed 150 hotel rooms per acre). Provided however, the City Commission may approve up to an additional 150 rooms per acre (for a maximum of 300 rooms per acre) from the "Hollywood Beach Hotel Room Pool: containing no more than 1000 rooms.

5. Parks, recreation, open space, cemeteries, and commercial recreation uses.
6. Public and semi-public facilities, institutional uses, private clubs.
7. Utilities, transportation, communication facilities, and easements.
8. Non-residential Agricultural uses (permitted until the area is converted to an urban use).
9. Special Residential Facilities categories 2 and 3 are permitted in GBUS, as defined in the Neighborhood section.
10. Residential uses are permitted in areas designated for general business in the following specific instances:

    a) Residential uses are permitted in the same structure provided that the residential floor area does not exceed 50% of the total floor area of the building and provided any residential use comes from reserve or flexibility units available. No more than 20% of General Business area, and no more than 10 acres per conversion, may be converted to residential use. Areas designated for office and general business on the Future Land Use Plan may be decreased by up to 20%.

    b) In the Central City Business (CCB) zoning district in the downtown Hollywood Regional Activity Center Area as permitted by Broward County Plan Amendment PCT 90-2.

    c) In the C-1 zoning district in the Hollywood Beach area as permitted by County Plan Amendment.

    d) For mixed commercial/residential developments greater than 20 acres in size, mixed commercial/residential structures where the first floor of such structure is totally confined to commercial uses and free standing multi-family residential uses are permitted, provided that residential density does not exceed 40 units per gross acre and the area of the site upon which the free standing residential development and mixed commercial/residential structures are constructed do not exceed 40% of the total gross acreage of the commercially designated parcel, and the flexibility and reserve units are available.

DRAFT

2. Office (OFF)

Designated for professional and administrative office spaces, corporate headquarters, and medical offices.

Office Uses:

1. Administrative, professional, research, and financial offices.

2. Laboratories.

4. Public and semi-public facilities, institutions.

5. Limited retail (including restaurant), service uses, and parking lots which are accessory to the primary office uses.

6. Residential uses are permitted in the same structure as an office use, provided that the residential floor area does not exceed 50% of the total floor area of the building and provided any residential use comes from reserve or flexibility units available in the citywide flexibility zone. No more than 20% of the office usemay be converted to residential use. Areas designated for office and general business on the Future Land Use Map may be decreased by up to 20% within the citywide flexibility zone.

7. Special residential facilities categories 2 and 3, as defined and permitted in the Residential land use category, subject to Zoning and Development Regulations.

3. Industrial (IND)

Designated for manufacturing, warehousing, and distribution facilities. Industrial zones are usually located away from residential areas to minimize conflicts and are accessible via major transportation routes.

Industrial Uses:

1. Industrial uses.

2. Heavy commercial uses, including wholesaling.

3. Office.

4. Educational, medical, scientific and industrial research facilities, and laboratories.

DRAFT

5. Utilities, transportation and communication facilities and easements.

6. Open space and recreation, community facilities, as long as the location of these uses does not preclude or adversely affect the future use of surrounding areas for industry.

7. Non-residential agricultural uses permitted until the area is converted to an urban use.

8. The following additional uses are permitted as long as the total area of these uses does not consume more than 20% of the industrial land on the City's Future Land Use Map within the citywide flexibility zone and as long as the location of these uses does not preclude or adversely affect the future use of the surrounding areas for industry:

a) Office, service and retail business uses.

b) Hotel, motel and other tourist accommodations.

9. Ancillary business or office uses within buildings devoted primarily to industrial uses.

4. Commercial Flex (COMFLEX – Archived Designation)

This designation is no longer active and is considered obsolete. No properties may be newly designated or reclassified as Commercial Flex.

Previously, this category provided flexibility for a mix of commercial uses, including retail, office, and light industrial activities, typically located along major corridors and intersections to enhance accessibility. However, this designation has been archived and is no longer available for future land use amendments or zoning changes.

5. Commercial Recreation (COMREC)

This designation is intended to support the development and continued operation of major public and private recreational facilities that serve both residents and visitors. These facilities are typically designed as revenue-generating enterprises and may function independently or as part of broader mixed-use developments. This land use category supports the City's broader planning objectives, including the enhancement of tourism corridors, the preservation of open space, and the promotion of compatible development patterns.

DRAFT

Commercial Recreation Uses:

1. Nature preserves and trails
2. Picnic areas and open space
3. Playgrounds and athletic fields
4. Lodging accommodations that are ancillary to the primary recreational use, such as:
    a. Hotels
    b. Motels
    c. Resort-style lodging
5. Indoor and outdoor commercial recreation facilities, such as:
    a. Sports complexes and stadiums
    b. Marinas and waterfront recreation
    c. Golf courses and driving ranges
    d. Bowling alleys and entertainment centers
6. Recreational vehicle (RV) parks, subject to the following density standards:
    a. Up to 10 RV sites per gross acre if permanent placement is permitted by local zoning
    b. Up to 20 RV sites per gross acre if permanent placement is prohibited, contingent upon allocation of available flexibility or redevelopment units by the City
7. Accessory uses and structures that are determined by the City to be integral and supportive of the primary recreational use, excluding residential uses.

DRAFT

Public Realm and Essential Services

Areas of the City dedicated to public functions that preserve natural systems, provide essential infrastructure, and support community connectivity and resilience. These areas include public facilities, conservation lands, parks and open spaces, transportation networks, and utility corridors, all of which are fundamental to the City's environmental health, mobility, and service delivery. In alignment with the Complete Community concept, these areas are planned and maintained to ensure long-term sustainability, equitable access, and the seamless integration of natural and built environments.

1. **Community Facility (COMFAC)**

   This designation is reserved for public and semi-public facilities, such as schools, libraries, and community centers, distributed throughout the City to serve the needs of residents.

   Community Facilities Uses

   1. Community facilities such as schools and educational uses, hospitals, governmental administration, police and fire stations, parking lots, libraries, nursing homes, cemeteries, jails, prisons, courts, civic centers and other public buildings and grounds, places of worship, and non-profit charitable organizations.

   2. Open Space and Recreation facilities.

   3. Special residential facilities categories 2 and 3, as described and defined in the Residential land use category, subject to zoning and land development regulations.

2. **Conservation (CONS)**

   Designation for the preservation of natural resources and protection of water supply, environmentally sensitive lands, wetlands, and wildlife habitats. These areas are typically located in environmentally sensitive regions. Lands with this designation shall include uses that do not harm the natural environment, disrupt the local ecosystem, or conflict with any applicable agreements or management policies set by federal, state, regional, county, municipal, or non-profit agencies responsible for overseeing the natural area.

   Conservation Uses:

DRAFT

1. Passive outdoor recreational uses such as nature centers or research stations.
2. Preserves
3. Archeological historic sites
4. Natural areas
5. Wildlife management areas

3. Open Space and Recreation (OSR)

Designation to be utilized for the dedication of parks, playgrounds, and recreational facilities to provide accessible recreational opportunities for residents.

Open Space and Recreation Uses:

1. Active and passive outdoor recreation.
2. Recreational, educational, civic or cultural buildings which are ancillary or accessory to the primary recreational use.
3. Water-oriented activities; such as boat docks and boat ramps.
4. Camp grounds and facilities.
5. Outdoor cultural, educational and civic structures and uses.
6. Concessions only when accessory to above uses.
7. Any uses allowed in Conservation

4. Transportation (TRANS)

Designation to be utilized for transportation infrastructure, including roads, railways, and transit stations integral to the City's transportation network.

Transportation Uses:

1. Airports - airports and related facilities designed primarily to serve the needs of airport users and employees, airport and aircraft operation and maintenance facilities, cargo distribution terminals and transit warehousing.
2. Railroad Facilities - railroads and supporting facilities.
3. Port Everglades - shipping and warehousing, and any other uses which may be permitted by the Port Authority other than residential uses.
4. Trafficway Rights-of-Way - collector and arterial streets, highways, freeways and expressways and supporting facilities except for required parking. No principal building, nor any land use which

DRAFT

substantially impedes the future construction of a highway are permitted.

5. **Utilities (UTL)**

   Designation to be utilized for primarily utility services and infrastructure, such as water treatment plants and electrical substations, strategically placed to efficiently serve the City's utility needs.

   Utility Uses:

   1. Water and wastewater treatment plants, pumping stations, electrical power plants and substations, solid waste disposal and transfer sites and their customary accessory uses.
   2. The following uses as long as their location does not preclude or adversely affect the future use of the surrounding areas for intended utility facilities:
      i. Recreation and open space
      ii. Communication facilities
      iii. Non-residential agricultural uses

DRAFT

OBJECTIVE X.X: Promote a vibrant and economically resilient Activity Center by encouraging a balanced mix of land uses—including office, retail, entertainment, residential, community facilities, open space, and multimodal transportation infrastructure. Focus development and redevelopment efforts along key corridors and support mid-rise and high-rise development in appropriate locations to maximize land use efficiency and enhance the urban skyline.

Activity Centers [Mixed-Use]

As defined in the Broward County Land Use Plan, the Activity Center designation is intended to encourage the development or redevelopment of areas that are regionally significant and serve as dynamic, multi-functional hubs. These centers are strategically located to maximize access to major transportation corridors and public transit systems, supporting a mix of uses that enhance economic vitality, urban living, and community engagement.

The designation in Hollywood promotes a diverse blend of residential, commercial, office, cultural, educational, and recreational uses within a compact, walkable, and transit-accessible environment. The primary goals of this designation include:

- Facilitating Mixed-Use Development: Encourage integrated land uses that support a vibrant, 24-hour urban environment, offering opportunities for living, working, shopping, and entertainment in close proximity.
- Enhancing Transit Connectivity: Support the use of mass transit and alternative transportation modes to reduce automobile dependency, improve regional mobility, and connect key destinations such as downtown Hollywood, Tri-Rail stations, the airport, and Port Everglades.
- Promoting High-Quality Urban Design: Guide development through design standards that ensure compatibility with surrounding neighborhoods, enhance the public realm, and contribute to a cohesive urban form.
- Stimulating Economic Development: Attract investment and employment opportunities by creating a desirable location for businesses, institutions, and innovation-driven industries.
- Improving Livability and Sustainability: Incorporate green infrastructure, public spaces, and community amenities that enhance quality of life and environmental resilience.

DRAFT

This designation aligns with Broward County's vision for sustainable, transit-oriented growth and provides a flexible framework for local governments to implement policies that reflect community needs and regional priorities.

Policy X.X: Encourage thoughtful design that aligns with the principles outlined in the Urban Design Element by:

- Creatively locating open spaces along transportation corridors to enhance pedestrian vistas;
- Placing buildings fronting the street;
- Improving public safety through active frontages and natural surveillance;
- Supporting a vibrant and inclusive public realm with accessible public spaces, plazas, and green areas that include amenities such as benches, lighting, landscaping, fountains, art, and vendor areas;
- Establish Mixed Use Design Guidelines within the land development codes.

Policy X.X: Ensure Activity Center proposals address community needs for affordable housing through mechanisms such as:

- Public housing program funding;
- Reduced lot sizes;
- Cluster and zero lot line housing;
- Vertical integration of residential and non-residential uses;
- Accessory dwelling units;
- Other proven strategies to increase affordable housing stock.

Policy X.X: Identify fully-connected routes to all destinations within the Activity Center by:

- Supporting internal transit systems (e.g., trolleys, community shuttles);
- Linking Downtown to regional destinations including I-95, Fort Lauderdale-Hollywood International Airport, Port Everglades, Tri-Rail, Central Beach, and surrounding neighborhoods;
- Providing integrated transit stops with amenities such as seating, shade, lighting, and bicycle parking;
- Implementing parking strategies that support transit use (e.g., shared parking, reduced ratios, structured parking).

Policy X.X: Foster a pedestrian-friendly environment by:

- Enhancing sidewalk and crosswalk connectivity;
- Minimizing vehicular-pedestrian conflicts;
- Prioritizing active ground-floor frontages;
- Integrating wide, ADA-compliant pedestrian and bicycle paths defined by buildings and landscaping;

DRAFT

- Designing streets to discourage isolation and promote connectivity (e.g., grid patterns);

Policy X.X: Preserve and celebrate the city's cultural heritage by:

- Protecting architectural, archaeological, and paleontological resources;
- Encouraging adaptive reuse of historic structures;
- Offering incentives for rehabilitation and preservation;
- Integrating heritage assets into new development;
- Reinforcing the unique identity of Historic Downtown Hollywood as the city's cultural, civic, and economic center.

Policy X.X: Expand green and public spaces by integrating the public realm with parks, plazas, greenways, and pocket parks into Activity Centers to enhance quality of life, support environmental sustainability, and provide accessible recreational opportunities.

Policy X.X: Residential use shall be a required principal component within an Activity Center. Maximum densities must be specified as units per gross acre in geographically designated areas and/or as the maximum number of permitted units.

Policy X.X: At least two non-residential uses must be permitted in the Activity Center as a principal use. Maximum non-residential intensities must be specified and must be based on the permitted uses section of the Broward County Land Use Plan. Non-residential intensities may vary along transit corridors and may be specified either as a maximum Floor Area Ratio (FAR) in geographically designated areas and/or as an overall maximum square footage by use.

Policy X.X: Activity Centers shown on the Broward County Land Use Plan with residential densities and hotel rooms (except for any Activity Center located east of the Intracoastal Waterway) may be increased by 20% or 500 dwelling units and/or hotel rooms, whichever is less, and/or permitted non-residential intensities within areas designated Activity Center on the Broward County Land Use Plan may be increased by 20% or 200,000 square feet, whichever is less, every five (5) years via a local land use plan amendment and recertification by the Broward County Planning Council, subject to the following:

1. The City must document that no more than 10% of permitted residential units and/or non-residential intensities proposed for increase are available for allocation at the time the local land use plan amendment is considered by the local government at a hearing.
2. "Every five (5) years" means starting from the effective date of a new or revised Activity Center.

DRAFT

3. An application for a Broward County Land Use Plan Amendment may be submitted at any time for Activity Center proposals which would exceed the above referenced residential and/or non-residential density/intensity increases.
4. The amendment shall include policies addressing the affordable/workforce housing needs of Activity Centers.
5. The amendment shall demonstrate sufficient capacity for public facilities and services, including public schools.

Policy X.X: An interlocal agreement must be executed no later than six months from the effective date of the adoption of an **Activity Center** with Broward County which provides that monitoring of development activity and enforcement of permitted land use densities and intensities shall be the responsibility of the affected municipality. A written record reflecting the current status of allocated or assigned dwelling units and floor area square footage for non-residential development for each **Activity Center** within the municipality's boundary shall be transmitted to the Planning Council twice per year, during the months of January and July. The referenced written record shall include a tally sheet reflecting the current total dwelling units and floor area square footage for non-residential development as follows:

1. Dwelling units and floor area square footage for non-residential development included per valid plats which have been approved by the municipality and which have restrictive notes reflecting the level of development; and
2. Dwelling units and floor area square footage for non-residential development included per valid site plans which have been approved by the municipality and which are not included per plats as described in 1. above; and
3. Dwelling units and floor area square footage for non-residential development of existing uses which are not included per plats or site plans as described in 1. and 2. above.

Policy X.X: Amend the City's Zoning and Land Development Regulations to incentivize mixed-use developments and promote redevelopment of surface parking lots into higher-value uses, such as public spaces or mixed-use projects near transit hubs.

DRAFT

1. **Downtown Regional Activity Center (RAC)**
   - Acreage: Approximately 1,486 acres
   - General Location: Generally located south of Sheridan Street, east of Interstate 95, west of South 17 Avenue and north of Pembroke Road.
   - Density and Intensity of Land Uses:
     - Residential Land Uses 15,100 dwelling units
     - Commercial Land Uses 3,280,000 square feet
     - Office Land Uses 1,500,000 square feet
     - Community Facilities 390,000 square feet
     - Open Space/ Recreation Uses Approx. 47.44 acre

   Remarks:
   - The referenced Open Space/Recreation uses shall preserve those open space and recreation land uses existing within the RAC designated area at the time of the effective date of Broward County Land Use Plan amendment PC 05-1/PCT 05-1: September 6, 2005.
   - The Office and Commercial intensities listed above shall be convertible from Office to Commercial (or vice versa) based on equivalence of traffic impacts (PM peak hour) as calculated by the current edition of the ITE Traffic Generation Manual.
   - Conversions from Office to Commercial (or vice versa) shall be implemented administratively by the City and shall be reported at least annually to the Broward County Planning Council as part of the City's RAC monitoring obligation. The total number of PM peak hour trips generated (as calculated by the current edition of the ITE Traffic Generation Manual) by the Office and Commercial intensities within the RAC area shall not exceed 8,026 PM peak hour trips.
   - The City shall within one year adopt land development regulations that shall protect residential areas. These land development regulations will require City Commission approval of any development proposals on residentially zoned lands located inside the RAC area which seeks either:
     i. To increase residential density above that permitted under the applicable property's zoned density; or
     ii. To introduce a non-residential use into a residentially zoned area.
   - The purpose and intent of these land development regulations shall be to protect established residential neighborhoods adjacent to the RAC area, while allowing appropriate redevelopment to take place.
   - Development within the RAC designated area shall conform to the City's City-Wide Master Plan, as adopted into this Comprehensive Plan. The City shall complete the studies which are intended to yield further design

DRAFT

guidelines for the Hollywood Boulevard, US 1 and Dixie Highway corridors within the RAC designated area. The City shall implement the design studies' recommendations, as appropriate, through either land use plan amendments, amendments to land development regulations, or both.

2. **Diplomat Activity Center (DAC)**

   A specialized district designed to accommodate diplomatic missions, consulates, and related activities.

   Acreage: Approximately 19.0 acres

   General Location: Both sides of State Road A1A, north of Hallandale Beach Boulevard.

   Density and Intensity of Land Uses:

   - Hotel Rooms: 1,500 rooms
   - Multi-Family Residential: 350 dwelling units
   - Commercial and Office Land Uses: 75,000 square feet
   - Convention Center: 150,000 square feet
   - Open Space: Publicly accessible Boardwalk parallel to the Intracoastal Waterway

DRAFT

OBJECTIVE X.X: Recognize the strategic proximity of the Sheridan Stationside Village Activity Center and the Oakwood Activity Center as a unique opportunity to create a cohesive, mixed-use, transit-oriented, and pedestrian-friendly district within the City. Sheridan, with its emphasis on residential and employment uses, and Oakwood, focused on residential and entertainment experiences, offer complementary functions that, when connected, can enhance economic vitality, housing diversity, and quality of life.

The City shall pursue planning and infrastructure strategies that:

- Strengthen multimodal connections between the two centers, including pedestrian pathways, bike lanes, and transit services.
- Align land use and urban design standards to ensure seamless transitions and complementary development.
- Promote shared amenities such as public spaces, parking facilities, and community services.
- Encourage coordinated investment and joint programming to activate the corridor and foster a sense of place.
- This integrated approach will support a vibrant urban environment that maximizes the strengths of both centers and establishes a signature destination within the City.

Policy X.X – Promote Integrated Mixed-Use Development

Encourage development that integrates residential, commercial, office, entertainment, and civic uses to support vibrant, 24-hour live-work-play environments. Mixed-use development shall be prioritized in designated activity centers and transit-accessible locations.

Policy X.X – Ensure High-Quality Urban Design

Require thoughtful site planning and architectural design that enhances the public realm, reinforces neighborhood identity, and contributes to a cohesive and visually appealing built environment. Buildings should front the street with minimal setbacks to promote active streetscapes.

Policy X.X – Discourage Incompatible Uses

Standalone automobile-oriented uses such as large surface parking lots, gas stations, auto repair facilities, car washes, auto dealerships, drive-throughs, equipment storage, big-box warehouses, and single-family detached dwellings are discouraged unless designed to prioritize pedestrian and transit accessibility.

Policy X.X – Foster Walkable Communities

DRAFT

Prioritize pedestrian-oriented development through active ground-floor uses, shaded streetscapes, safe crossings, and public gathering spaces that encourage walking and social interaction.

Policy X.X – Enhance Pedestrian Infrastructure

Require wide, ADA-compliant pedestrian and bicycle paths (minimum 5 feet), landscaped and shaded for safety and comfort. Streets shall be designed to discourage isolation and favor grid patterns that enhance connectivity.

Policy X.X – Provide Public Amenities

Include pedestrian and transit amenities such as seating, shade structures, lighting, trash receptacles, bicycle parking, and decorative features in public areas to support comfort and usability.

Policy X.X – Support Transit Accessibility

Promote land use patterns that leverage proximity to regional transit services to reduce automobile dependency, lower greenhouse gas emissions, and improve mobility for all residents.

Policy X.X – Integrate Transit Facilities

Provide integrated transit stops with shelters or stations within Major Transit Station Areas. Encourage design features that connect development to regional transit stations.

Policy X.X – Align Parking Strategies with Transit Goals

Adopt parking strategies that promote transit use, including shared parking, structured parking, reduced parking ratios, and avoiding parking along street frontages.

Policy X.X – Account for Modal Shift in Impact Analysis

Transportation impact analyses must consider the modal shift facilitated by transit services and transit-oriented design elements.

Policy X.X – Establish Greenway Networks

Create linear parks and greenways that serve as both ecological corridors and recreational connectors between neighborhoods and activity centers.

Policy X.X – Strengthen Activity Center Connectivity

Promote strategic connections between the Sheridan and Oakwood Activity Centers to create a unified corridor of economic, social, and environmental vitality.

DRAFT

Policy X.X – Develop Multimodal Transportation Links

Implement dedicated bicycle lanes, enhanced pedestrian pathways, and local shuttle or circulator services to improve safe and efficient connectivity between activity centers.

Policy X.X – Encourage Shared Infrastructure

Support the shared use of community facilities, structured parking, and public spaces to maximize efficiency and foster regional cohesion.

Policy X.X – Facilitate Collaborative Planning

Engage stakeholders from both activity centers in joint planning efforts to align visions, coordinate infrastructure investments, and leverage funding opportunities.

Policy X.X – Require Non-Residential Uses in Mixed-Use Areas

Mixed-use developments shall include at least two non-residential principal uses, which may include retail, office, live-work units, restaurants, personal services, hotels/motels, light industrial, research businesses, civic facilities, or institutional uses.

3. Sheridan Stationside Village Activity Center (SAC)

The Sheridan Activity Center (SAC) land use category is designed to catalyze vibrant, sustainable, and accessible urban environments in and around the Sheridan Street Major Transit Station Area (SSMTSA) and other key regional transit nodes, including Tri-Rail stations, major transit hubs, and neighborhood-level transit stations. This designation supports the transformation of underutilized or strategically located areas into dynamic, mixed-use communities that are well-integrated with regional transportation infrastructure.

Acreage: Approximately 40.4 acres

General Location: East side of the C.S.X. Railroad, between Sheridan Street and Taft Street.

Density and Intensity of Land Uses:

- Commercial Land Uses: 300,000 square feet
- Office Land Uses: 299,000 square feet
- High-rise† Residential Land Uses: 550 dwelling units
- Multi-Family Residential Land Uses: 500 dwelling units
- Hotel: 150 rooms

DRAFT

- Transportation Uses: (Parking for Tri-Rail Station) 280,000 square feet, 793 spaces (minimum)

Remarks:

- Sheridan Stationside Village is directly served by a Tri-Rail Station.
- Pursuant to Agreement between Stationside Village Associates and FDOT, 793 parking spaces are obligated for the Tri-Rail Station.
- The non-residential FAR is 0.218.P
- Prior to the issuance of building permits for more than 500 residential units, a minimum of 100,000 square feet of commercial (retail and/or office) square footage must be under construction.
- Public park/Oak Hammock: Minimum 6 acres.
- At least 20% of the total dwelling units (210 dwelling units) must be "workforce-income" affordable housing as defined in Section 420.5095, Florida Statutes, for those persons having a total anticipated income for the household that is not more than 140% of the area median income, adjusted for household size.

4. Oakwood Activity Center (OAC)

Acreage: Approximately 112.5 acres

General Location: On the east side of Interstate 95, between Stirling Road and Sheridan Street.

Density and Intensity of Land Uses:

- Residential Land Uses: 3,800 multi-family dwelling units*
- Hotel Rooms: 625 rooms
- Office Land Uses: 1,890,000 square feet
- Commercial Land Uses: 1,200,000 square feet
- Recreation and Open Space: 2.5 acres minimum

Remarks:

- At least 380 (10%) of the multi-family dwelling units will be affordable at the "moderate income" (up to 120% of the median income) level or below, for a minimum of 30 years.

DRAFT

OBJECTIVE X.X: The SR7AC designation promotes redevelopment, multi-use and mixed-use development, mass transit, reduced automobile reliance, quality development incentives, and a well-defined urban form.

This objective seeks to:

1. Prioritize a balanced mix of office, service, retail, entertainment, residential spaces, community facilities, open spaces, and transportation systems to cultivate a vibrant and livable transit-oriented corridor.

2. Foster a pedestrian-focused core to enhance accessibility and activity within the area.

3. Support mass transit and alternative transportation modes to reduce automobile dependence

4. Promote thoughtful urban planning by creatively situating buildings, transportation routes, and open spaces to establish cohesive vistas and interlink the corridors.

> **Policy X.X: SR7AC** shall be applied exclusively to geographic areas located within approximately 1/4 mile on either side of the primary transit corridor. This designation may extend beyond 1/4 mile to encompass major intersections, activity nodes, and areas served by existing or funded community shuttle services.
>
> **Policy X.X:** The City may consider standalone uses when there is a significant economic development benefit demonstrated along with sufficient intensity to support transit services.
>
> **Policy X.X:** Residential use shall be a principal component of the **SR7AC** with densities defined as both units per gross acre and/or the total minimum number of units allowed.
>
> **Policy X.X:** A minimum of two non-residential uses must be designated as principal components within the **SR7AC**, which may include retail, office, restaurants, personal services, hotel/motel,, research business, civic, or institutional uses.
>
> **Policy X.X:** Additional or expanded standalone automobile-oriented uses, such as large surface parking lots, gas stations, electric vehicle charging stations, auto repair shops, car washes, auto dealerships, drive-through facilities, indoor and outdoor storage facilities, big-box warehouses, and single-family detached dwellings, are discouraged.
>
> **Policy X.X:** New development within the SR7 Activity Center (SR7AC) must provide a transportation impact analysis that accounts for the anticipated modal shift resulting from enhanced transit services and transit-oriented design features.

DRAFT

Policy X.X: SR7AC must ensure seamless integration with adjacent developments and establish strong connectivity to transit stations and stops.

Policy X.X: Public plazas, urban open spaces, privately owned publicly available open spaces, or accessible green space pocket parks shall be integral components of all development along the SR7AC Corridor, promoting public accessibility and community engagement.

Policy X.X: **SR7AC** must incorporate pedestrian-friendly design features that enhance mobility and ensure connectivity to transit stops and stations, including but not limited to the following characteristics:

1. Transit Stops: Include integrated stops with shelters or stations within the **SR7AC** area.

2. Pedestrian and Bicycle Paths: Ensure wide, ADA-compliant paths (minimum 5 feet) that are landscaped, shaded, and offer shelter from the elements, minimizing conflicts with motorized traffic.

3. Street-Facing Buildings: Encourage buildings with zero or minimal setbacks to front the street while accommodating space for outdoor seating.

4. Transit-Supportive Parking Strategies: Enforce parking regulations that promote transit use, such as shared parking, parking structures, reduced ratios, and avoiding parking frontage on streets.

5. Connected Street Design: Design streets to discourage isolation and improve connectivity, employing a grid pattern where possible.

6. Amenities for Pedestrians and Transit Users: Provide internal amenities such as seating, shade, lighting, trash receptacles, bike parking, and decorative features in public spaces or plazas to serve residents and employees within the TOC area.

7. Accessory parking uses, including parking garages and surface lots, shall not be permitted to front directly onto SR7. Where such facilities are necessary, they must be located behind primary structures and effectively screened from public view through landscaping, architectural treatments, or other appropriate design measures.

5. State Road 7/U.S. 441 Activity Center (SR7AC)

The State Road 7/ U.S. 441 Activity Center is designated by the Broward County Comprehensive Plan Transportation Element, the Broward County Transit Master Plan and Broward, County Metropolitan Planning Organization's (MPO) Long Range Transportation Plan, and the Broward County Transit Development Plan. The

DRAFT

designation promotes mixed-use development near transit stations or stops along high-performance transit corridors, such as bus rapid transit with a focus on State Road 7.

General Location: Located along both sides of State Road 7/U.S. 441 between the northern and southern City of Hollywood boundaries.

Acreage: Approximately 980.3 acres

Density and Intensity of Land Uses:

- Commercial Land Uses: 15,000,000 square feet
- Office Uses: 2,000,000 square feet
- Community Facilities: 1,000,000 square feet
- Industrial Land Uses: 1,000,000 square feet
- Hotel: 2,500 rooms
- Residential* 5,309 dwelling units consisting of: 2,400 single family homes, 2,400 townhomes and 509 garden apartments.

Remarks:

- Dwelling units from any given category (ex: single family, townhomes, etc.) may be substituted for dwelling units of another category provided that the substitution results in the same or lesser student generation using the County's adopted student generation rates.

DRAFT

OBJECTIVE X.X: Coordinate future land uses with available public facilities, soil conditions, topography, natural resources, and endangered species.

Amendments to the Plan

When evaluating future land use map amendments, the City should consider a comprehensive set of factors to ensure that proposed changes align with the community's long-term vision, planning principles, and sustainability goals. These considerations should include the compatibility of proposed uses with surrounding development, the availability and capacity of public infrastructure and services, potential impacts on natural resources and environmental features, consistency with regional and local transportation plans, and the ability to support affordable and diverse housing options. Additionally, the City should assess whether the amendment supports economic development objectives, promotes orderly growth, and maintains the character and livability of existing neighborhoods.

Policy X.X: Evaluate proposed plan amendments and development or redevelopment requests based on the following updated guidelines:

1. Consistency with the Infrastructure, Capital Improvements, Coastal Management, and Transportation Elements.

2. Adherence to state and water management district facilities plans, incorporating climate adaptation and resilience measures.

3. Inclusion of mitigation measures or developer contributions to address potential impacts on public facilities.

Policy X.X: Continue to assess the adequacy of service for sanitary sewer, solid waste, drainage, potable water, roads, and recreation, by adopting updated Levels of Service (LOS) standards outlined and set forth in the goals, objectives, and policies of the Transportation, Infrastructure, and Recreation and Open Space Elements of the Comprehensive Plan.

Policy X.X: Consider the availability of sanitary sewer service or plans to extend or provide such service within a financially feasible capital plan when amendments to the Cit's Land Use Plan for increased densities and intensities are proposed.

Policy X.X: Evaluate the individual and cumulative impacts of land use plan amendments on existing and planned transportation facilities to ensure compatibility and sustainable growth.

Policy X.X: Consider the impacts of future land use map amendments on wetland resources and minimize those impacts to the maximum extent practicable.

DRAFT

Policy X.X: Discourage land use plan amendments which negatively impact hurricane evacuation clearance times and/or emergency shelter capacities.

Policy X.X: Ensure consistency of land use plan amendments with the Broward County Public School Facilities Elements. The consistency finding shall address whether sufficient capacity is available or anticipated within the short or long range planning horizon, to accommodate the projected student impact of proposed amendments. As provided for within the Amended Interlocal Agreement for Public School Facilities Planning (ILA), the School Board of Broward County shall advise the City regarding the projected student impact of amendments and the availability of capacity at impacted schools.

Policy X.X: Support amendments that include very low or low-income housing by mitigating potential impacts to public facilities and services through coordinated efforts with Broward County.

Policy X.X: Implement the following affordable housing strategies to achieve and/or maintain a sufficient supply of affordable housing when amendments which propose to add 100 or more residential dwelling units to the existing densities approved by the Broward County Land Use Plan (BCLUP):

a) impact fees, in lieu fees, and/or public funds, in which the City, and/or Broward County, and/or other appropriate agencies/entities (including, but not limited to, major employers):
    1. provide for the construction or supply of affordable housing;
    2. provide funding to facilitate the affordable purchase or renting of housing;
    3. facilitate the maintenance of the existing supply of affordable housing stock, if any;
b) property tax abatement programs aimed at preserving or creating affordable housing;
c) streamlined and reduced-cost permitting procedures for affordable housing;
d) specific minimum set-aside requirements for new affordable housing construction;
e) use of appropriate existing public lands, or public land-banking, to facilitate an affordable housing supply;
f) programs and policies to facilitate the development and use of affordable housing density bonus provisions;

DRAFT

g) land development regulations which promote the availability of affordable housing such as reduced lot size and floor area for dwelling units, construction of zero lot line and cluster housing, vertical integration of residential units with non-residential uses, and the allowance of accessory dwelling units;
h) the existing supply of affordable housing.

Demonstrate compliance with this Policy at the time of applicable amendments, by establishing implementation or ensured adoption of appropriate program measures to implement methods and programs to achieve and/or maintain a sufficient supply of affordable housing for each of the following affordable housing income categories defined by the BCLUP: very-low, low, and moderate.

Policy X.X: Ensure that amendments to the Future Land Use Map containing golf courses, including closed golf courses, address the following:

a. The impact of the loss of Open Spaces on the surrounding residential areas. The loss of Open Spaces must be mitigated through provision of Parks and Open Spaces to serve the surrounding **Neighborhoods**.

b. Management of stormwater retention taking into account the extent to which the golf course provided storm water retention for the surrounding development and how this will be mitigated, along with any additional stormwater impacts created by the new development.

c. Minimization of the impact on natural resources including Wetlands, Lakes, Aquifer Recharge Areas and the Tree Canopy, including any historic trees on the site.

d. Mitigation of environmental contamination. The level of environmental contamination must be determined by conducting a Phase 1 environmental assessment. A Phase 2 environmental assessment may be required based upon the findings of the Phase 1 assessment.

e. Integration of the proposed development with the surrounding areas including how the development will tie into the existing **Neighborhoods** through roads, sidewalks, Parks, Open Spaces and Greenways.

DRAFT

GOAL X.C: PLAN TOGETHER TO GROW TOGETHER

Promote effective regional planning through intergovernmental collaboration, consistency with the Broward County Land Use Plan, and coordinated implementation of planning, zoning, infrastructure, and redevelopment initiatives. The intent of this goal is to recognize the need for land use decisions and infrastructure planning to be coordinated across jurisdictional boundaries. This goal supports partnerships with Broward County, adjacent municipalities, the Seminole Tribe, regional planning organizations, and state agencies to ensure local planning efforts are aligned with broader policies, growth targets, transportation investments, and adaptable planning strategies.

OBJECTIVE X.X: Enhance regional coordination, intergovernmental partnerships, and collaborative governance efforts to ensure land use decisions align with local, county, and state priorities.

Policy X.X: Coordinate the City of Hollywood's Comprehensive Plan with the plans of Broward County, adjacent municipalities, the Broward County School Board, and other appropriate governmental agencies to ensure consistency in land use planning, infrastructure development, and regional sustainability initiatives.

Policy X.X: Partner with Broward County, adjacent municipalities and the Metropolitan Planning Organization to establish urban growth targets that support transit feasibility, align with regional planning goals, and foster vibrant, well-defined centers for social and economic exchange.

Policy X.X: Leverage the City's membership in the Broward County MPO to support initiatives for improving state and county roads in Hollywood and advocate for projects that align with the City's multimodal transportation goals, Complete Streets principles, and Vision Zero commitments.

Policy X.X: Coordinate with the transportation plans and programs of the Broward County Metropolitan Planning Organization (MPO), Broward County Transit, and FDOT's 5-Year Work Plan to support improvements to regional connectivity, transit accessibility, and roadway infrastructure while ensuring that these efforts remain aligned with local transportation goals, including Vision Zero and Complete Streets initiatives.

Policy X.X: Actively, equitably, and respectfully engage with the Seminole Nation when conducting planning processes, examining land uses, zoning and redevelopment of properties adjacent to Seminole Lands and ensure that their input is incorporated into all relevant plans.

DRAFT

Policy X.X: Strengthen intergovernmental coordination and cooperation with the Seminole Tribal Council, Metropolitan Planning Organization, SFRPC, US 441/SR 7 Collaborative, Broward County, the State, and the City through improved communication and regular meetings to better understand the schedule and impacts of Seminole Lands projects.

DRAFT

OBJECTIVE X.X: Ensure consistency with the Broward County Land Use Plan by adopting the following goals, objectives, and policies into the City's Land Use Element, by reference, from the other elements of the City's Comprehensive Plan.

Broward County Land Use Plan

Aligning the City's Land Use Plan with the Broward County Land Use Plan is essential for ensuring legal compliance, promoting regional coordination, and supporting sustainable growth. This alignment enables the City to contribute to countywide goals related to infrastructure, transportation, environmental protection, and climate resilience. It also facilitates access to funding opportunities and technical resources, while ensuring that local development decisions are consistent with broader regional strategies. By maintaining this consistency, the City strengthens its ability to plan effectively and respond to future challenges in a cohesive and integrated manner. The referenced content is detailed in Exhibit A, located at the end of the Land Use Element.

Policy X.X: The **Future Land Use Element** includes by reference the following comprehensive plan goals, objectives, and policies:

Housing

Recreation and Open Space

Transportation

Utilities

Capital Improvements

Intergovernmental Coordination

Conservation

Coastal Management

Policy X.X: Ensure compliance with the provisions of the Broward Land Use Plan, policies XXX and their associated policies, are adopted by reference into the Future Land Use Element.

Policy X.X: Complete the State local comprehensive plan amendment review process as specified in Chapter 163, Florida Statutes prior to the recertification of the City's **Future Land Use Element** by the Broward County Planning Council.

Policy X.X: Continue to adhere to the Broward County Planning Council's certification and recertification process, as established by the Broward

DRAFT

County Charter. This process ensures that the City's land use plans remain in substantial conformity with the Broward County Land Use Plan. The City will also adhere to the procedures outlined in the "Administrative Rules Document: Broward County Land Use Plan" to support consistent and effective implementation.

DRAFT

OBJECTIVE X.X: The City shall follow Flexibility Rules established in the Broward County Land Use Plan (BCLUP) to facilitate the arrangement of residential densities.

Flexibility Units

In the Broward County Land Use Plan, flexibility units are a planning tool that allows municipalities to adjust residential densities within designated flexibility zones without requiring a formal amendment to the County Land Use Plan. These units represent the difference between the number of residential units permitted by the County Plan and those allowed by a municipality's certified Future Land Use Map. They provide cities with the ability to respond to local development needs while maintaining consistency with countywide planning goals. The City must report the assignment of flexibility units to the Broward County Planning Council to ensure compliance.

Policy X.X: The City shall utilize the Broward County Land Use Plan's "Flexibility Rules," including the allocation of Flexibility Units and Reserve Units, in accordance with the Broward County Land Use Plan and the "Administrative Rules Document: Broward County Land Use Plan." All allocations shall ensure compatibility with adjacent land uses and consider impacts on public school facilities.

Special consideration shall be given to the following situations:

- Allocations to sites east of the Intracoastal Waterway that may affect access to public beaches.
- Allocations to sites contiguous to another municipality, upon request of that municipality.
- Allocations to sites adjacent to Environmentally Sensitive Lands or to Broward County or regional parks—including those within 500 feet or separated only by streets, waterways, or easements—upon request of the Broward County Commission.

Within areas east of the Intracoastal Waterway:

- Flexibility or Redevelopment Unit allocations shall not result in a residential density exceeding 25 dwelling units per gross acre or 100% of the maximum number of dwelling units indicated by the local land use plan map, whichever is less.

DRAFT

- Land designated for residential use that is converted to office or neighborhood retail use through the five percent (5%) residential-to-commercial flexibility rule shall not be included in calculations of allowable residential density. This restriction does not apply to conversions implemented through rezoning or other official action prior to November 5, 2004.

Policy X.X: Compatibility with existing and future land uses shall be a primary consideration in the review and approval of amendments to the Broward County Land Use Plan and the City's Future Land Use Map. In predominantly developed areas, the established character of the community shall guide amendment decisions. However, approved redevelopment plans aimed at eliminating or reducing blight may support land use patterns that differ from existing conditions when appropriate.

Policy X.X: Expand residential development outside of Downtown through the assignment of flexibility units, while safeguarding existing residential neighborhoods. Require City Commission approval for any proposed density increases or introduction of non-residential uses within residential zones inside the Activity Center. Monitor development and redevelopment activities to ensure compliance with adopted regulations and appropriate growth.

DRAFT

OBJECTIVE X.X: Ensure that all land development activities within the City of Hollywood are consistent with countywide planning standards, including platting, permitting, and land use regulations, in order to promote orderly growth, legal compliance, and alignment with the Broward County Land Use Plan and Land Development Code.

Platting

To promote orderly growth and ensure legal consistency across all development activities, the City of Hollywood is committed to aligning its land development practices with countywide planning standards. This includes adherence to the Broward County Land Use Plan, Land Development Code, and platting requirements. The following policies are designed to uphold these standards by guiding the issuance of development permits, enforcing platting regulations, and ensuring that all land use decisions are consistent with regional planning objectives.

Policy X.X: Deny any applications for building permits for the construction of a principal building on a parcel of land unless a plat including the parcel or parcels of land has been approved by the Broward County Commission and recorded in the official records of Broward County subsequent to June 4, 1953. This section will not apply to an application for a building permit which meets the criteria established within Article 4 of the Administrative Rules Document: BrowardNext.

Policy X.X: Ensure development permits granted are consistent with the Broward County Land Use Plan.

Policy X.X: Continue to enforce the countywide platting requirements of the Broward County Charter and ensure that land development meets the minimum standards of the Broward County Land Development Code. Amend the City's Zoning and Land Development Regulations as necessary to require platting at least in those circumstances where the Broward County Land Use Plan requires platting; and such regulations may establish additional standards, procedures, and requirements.

DRAFT
